Buttons

Starting 5.1, buttons have been categorized into System Buttons and Application Buttons.

System Buttons

These are buttons which have default standard behaviour implemented by the system. These have been moved to a separate palette attached on top of the form. Their colors, etc. can be individually changed using css but you cannot override their behaviour by embedding scripts, etc. There are special commands in the form to convert them into Application Buttons, if you need to embed scripts, etc. System Buttons are described below.

Name	Command to convert into an Application Button	CSS Style
Utilities		
Clear	noclear	palette-sc
Show	noshow	palette-sc
Refresh		palette-sc
Navigators		
Top	nonav	palette-nav
Previous	nonav	palette-nav
Next	nonav	palette-nav
Bottom	nonav	palette-nav
Standard		
Add	nostd	palette-std
Update	nostd	palette-std
Delete	nostd	palette-std
Save	nostd	palette-std
