

## Log in as root

If you get an error saying that root login is not allow you need to do the following

- Log in as ec2-user and then

```
sudo -s  
vi /root/.ssh/authorized_keys
```

- Delete the lines at the begining of the file that say COMMAND... until you get to the words ssh-rsa.
- If required, edit sshd\_config to set variable PermitRootLogin to PermitRootLogin without-password (without quotes) and restart sshd.

```
vi /etc/ssh/sshd_config  
sudo /etc/init.d/sshd restart
```
