

# Java Version and CrystalClear Report Viewer

Starting Java Version 7.40, Crystal Clear Viewer may give security violation. There are two alternatives:

(1) On the workstation, go to Control Panel->Java, Security tab and

- set Enable Java content in the browser, and
- set the Security Level to Medium

(2) If the above does not work, uninstall Java (all versions) from the workstation and install Java 6 instead.

- get it from <http://demo.dreamapps.com/da/docs/downloads/jdk-6u45-windows-i586.exe> – 32 bit version
- get it from <http://demo.dreamapps.com/da/docs/downloads/jdk-6u45-windows-x64.exe> – 64 bit version
