

DreamApps Repository

The latest version of DreamApps is available for download from

<http://bit.ly/da-repo>

It contains the following files:

- **1-da.zip** If you are installing DreamApps for the first time on a server, unzip it in folder **tomcat/webapps** folder.
- **2-html.zip** Go to folder **tomcat/webapps/da** and delete folder **html**, if it exists. Unzip the zip file here.
- **3-WEB-INF.zip** Go to folder **tomcat/webapps/da/WEB-INF** and delete the **lib**, **resource** and **reports** folders, if they exist. Unzip the zip file here. Restart **Tomcat** and then run **Upgrade All Tables** from initdb.
- **da.fields** This is the latest copy of the standard field table, provided for reference.
- **openSUSE-12.iso** This is the latest reference Linux platform. Use it to create a bootable installation VCD for OpenSUSE 12.3. It has everything you need to run DreamApps.
- **Win-Downloads.zip** Contains all the third party downloads you need to run it on Windows.

To make sure that things run smoothly without change, ensure that the Tomcat root folder is **/usr/tomcat**. This applies to both **Windows** and **Linux**.
