

## Custom Interfaces

Usually, installation-wide interfaces to external services are defined in **da.globals**. However, this may not be practical on multi-tenanted installations where custom interfaces may be required for individual business IDs. To define a custom interface log in to the individual business ERP site and go to

System Administration->Settings->Interfaces

Use **Code** to name the interface and enter the interface parameters in the **Property List** box. The format should be exactly the same as you'd have used to define the same in da.globals. Two interface names, namely, **SMS** and **Mail** are reserved for defining SMS and email custom interfaces, respectively.

For an example, go to <http://homepro.dreamapps.com> and log in to the ERP site.
