POS Notes

Pricing

Single Item

- Price is picked up for the item when added.

Kit Items

- The entire kit is exploded directly after the Kit is added.
- The price is picked up for each individual items.
- The price for the Kit item is set to zero.
- The receipt shows all the exploded items with their individual prices.

Bundles

- The entire bundle is exploded directly after the Bundle is added.
- The price is picked up for only the Bundle.
- The price for the individual items are set to zero.
- The receipt shows only the Bundle and hides the individual items that constitute the Bundle

Costing

For all items, costing is done at the time of Batch Posting.

Single Item

- The cost is picked up for the item when the Batch is Posted.

Kit Items

- The cost is picked up for each individual item that constitute the Kit when the Batch is Posted

Bundles

- The cost is picked up for each individual item that constitute the Bundle when the Batch is Posted

Notes

1. The Kit item need not have a price of it's own as its price is calculated by adding up the individual item prices.
2. The Kit components **must** have prices so that the total price of the kit may be calculated.
3. The Bundle item **must** have a price, as individual item prices are ignored.
4. The costs are always taken from the individual item costs. So all items must have costs set.
5. Both the Bundle as well as the Kit must be set as **Non-Stock** items.
