User & Security

- a very fine-grained level of detail in assigning permissions.
- User-level security allows the database administrator to group users with similar needs into common pools. Permissioncan then be granted to work group intstead of to individual users, easing the administration of permissions.

ROLES

```
  This is a principle by which developers create a systems that limit access
or restrict operations according to a user's constructed role within a
system. This is also often called **role-based**principle to ensure that
authorized users do not gain access to privileged information.
```

TEAM.

```
  After you have defined the Team, you can link the Team memeber to the Team
and Role. By doing so, you can access to any of the transaction entry by
**TEAM**.
```

LIMIT

```
  The function on user Limit is activated for a particular transaction type
only if you have set any limit for at least one  user for one transaction
type.
```

Visibility

```
  Once you set up any value for a particular context, all users not
satisfying the condition will be barred from viewing any record in all lists
in the system.
```
