

Singapore GST

The features required by Inland Revenue Authority of Singapore (IRAS) to implement Goods and Services Tax (GST) related components are installed by simply inserting the word **sg-iras** in the comma-separated list of **Custom Features** in the target business. To do this, go to

System Administration » Business, Modules and Models

from the **Home** page, insert **sg-iras** in **Custom Features** and click on **Update**.

Also, please note that you if the **Tax Number** is blank, the business itself will be considered an **Unregistered Entity**.

The Tax Table

The tax table defines the tax structure of the business by defining the tax components, rates, codes, accounts, etc., depending on **Tax Scope**, an attribute of affected entity (Customer or Supplier) and **Tax Category**, an attribute of the item being supplied or purchased.

Once you have set **sg-iras** in the **Custom Features**, the Tax Table along with the related codes are automatically preloaded. Any predefined tax table entries will be totally replaced by the auto-loader.

So, when you go to

Cross Application » Settings

and click on the **Tax Table** tab, you will see

Sales and Purchase Transactions

The default settings will be automatically picked up during entry of Sales and Purchase Transactions and the rates and tax codes applied accordingly. However, an authorized user may override such default assignments and calculations. The Operational procedures for these transactions, however, are beyond the scope of this page and have been discussed elsewhere.
